Academic Crest

The parts of the crest either represent national symbols or elements of a unique Namibian landscape and culture. the colours have been selected to represent the national spectrum, as influenced by the heritage from the Namibian flag:

Red: represents Namibia's most important resource, its people. It refers to their heroism and their determination to build a future of equal opportunity for all.

Blue: represents the clear Namibian sky, as well as the Atlantic Ocean, the country's precious water resources and rain.

Gold: represents life and energy (the sun).

Parts of the Crest

- 1. The Atom** is one of the most basic recognisable symbols of science. Positioned under the sun it symbolizes science and technology as the foundations of illumination at the University.
- 2. The Arch** is the threshold of knowledge. It is the gateway to the future and encourages a thirst for knowledge and discovery. Namibia becomes the threshold for new development - entering a new era.
- 3. The Ribbon** is derived from the diverse traditional cultures of Namibian dress, amongst the Damara, Herero, Himba and Owambo groups; it is an extension of the red band representing people. It is a symbol of achievement and prestige, and recognizes traditional cultures of pageantry. the ribbon epitomises flexibility and adaptiveness by which NUST exemplifies and enables its students to achieve higher knowledge.
- 4. The Sun** represents the outcome of scientific and technological innovation and enlightenment. Education is a form of discovery, energy and life that this symbol should highlight through its embodiment of the sun.
- 5. The Shield** is the symbol of learning institutions (traditional) - signaling tradition, strength and readiness.
- 6. The Red Band** represents the people and also blood, which gives life. People are the lifeblood of the University and country. It refers to their heroism and their determination to build a future of equal opportunity for all. the position of the red band represents 'crossing over the threshold'.

MUCHINENYIKA Simon H

Thesis: A Conceptual Framework for Energy Efficient Mobile Application Development

Supervisor: Prof Hippolyte Muyingi

ABSTRACT

Hardware advances, increased broadband speeds, and a vast network of mobile phone software applications across the globe have resulted in newer functionalities realised on mobile platforms that were conventionally for desktop computers. However, unlike desktop computers, mobile devices are not always connected to a power socket but have to rely on the battery to sustain their energy demands. To succor the threat from battery capacity limitation, work has been done mainly at lower layers of the mobile platform, that is, hardware and operating systems. Little has been done on the application layer as there is little knowledge and tools that software application developers could use. This thesis proposes a conceptual framework to describe energy hotspots on a mobile platform to aid further research in developing energy-efficient mobile software. Since a mobile platform consists of several hardware components that are indirectly controlled by software, a case study on mobile devices was first used to determine the hardware components that consume the most energy. Systematic reviews were then used to assess the effort put into mitigating energy inefficiencies in software development by measuring the number of scholarly and technical publications in this area over ten years. Results were then compared with the case study findings, identifying the need to synchronise research efforts between academia and the industry. Focus areas of the proposed framework came from these two studies, and experiments were used in the building process to have empirical results that justify the inclusion of various framework components. The framework is extensible, meaning areas not fully exhausted, such as accessibility and security, can later be added after sufficient studies. Software developers also quickly reference proposed framework components to improve energy efficiency, given the short development cycle available to mobile application developers.
